

# QuickSleeper<sup>⑤</sup>

## 360° support

- + **Easy access** to all services (training, device, videos, etc.).
- + **A complete guide** for a smooth start with QuickSleeper.
- + **Clinical videos** by quadrant for adults and children.
- + **A clinical question?** A dentist with expertise in osteocentral anaesthesia will answer you.

+ Complete access to **the bibliography**.

# QuickSleeper<sup>⑤</sup>

"The Quicksleeper is a new way of working for me. This instrument helped to reduce my stress over setbacks and to significantly reduce the quantity of anaesthesia that I inject. In fact, an emergency case with pulpitis in a mandibular 6 tooth was managed easily with just one pain-free intra-osseous cartridge of anaesthesia and the work was immediate without any waiting time. Most patients ask me "where are the needle and the injection gone?", it's a real relief for them and for me.

All of my procedures are now quicker and more comfortable. They also appreciate that there's no more lower lip anaesthesia (Vincent's symptom). The Quicksleeper will be a comfort for your patients but most of all for you."  
**Dr A. SETTE**  
 General Practitioner,  
 Morcenx-la-Nouvelle  
 (40)

Immediate, effective, and pain-free anaesthesia.

## Dentahitec

Les stylos d'anesthésie qui changent la vie

# Osteocentral anaesthesia

## The essentials

**A particularly effective technique**  
*"The anaesthetic solution is injected as close as possible to the target, which is the apex. We know that failure in anaesthesia is often related to the injection being too far from the target site, leading to the excessive dilution and ineffectiveness of our anaesthetic solution."*  
**Dr. P.Y. GREAUD** - General Practitioner, Brains (44)  
 Le fil dentaire

## An efficient practice!

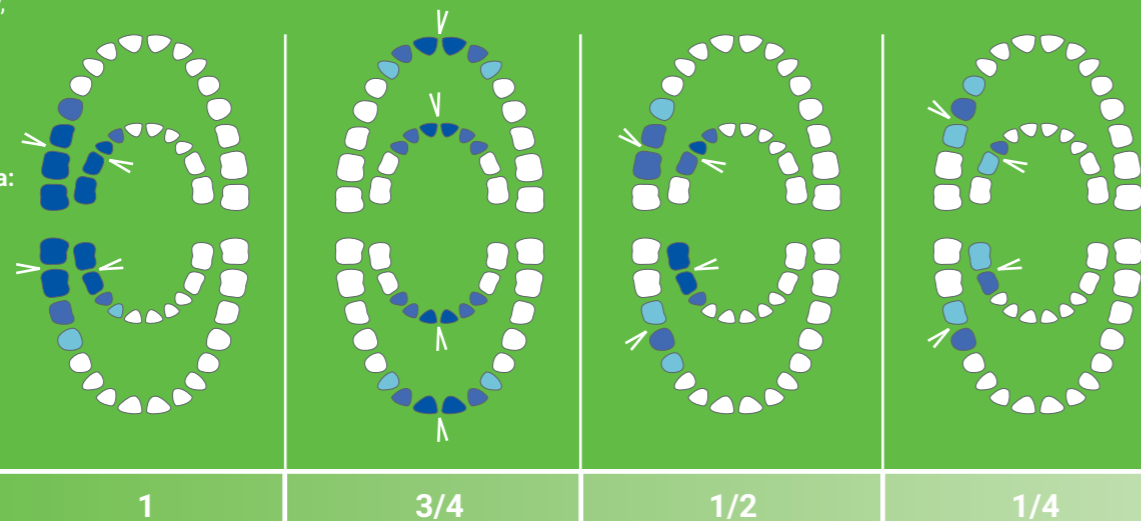

- Effectiveness relies on a simple 3-step protocol:
1. Attached gum anaesthesia with pain-free insertion.
  2. Bone perforation.
  3. Injection near the apexes for immediate effectiveness.

## Optimise all of your anaesthetic injections without the need for additional palatal or lingual anaesthesia

This data is for information purposes only and varies depending on the vasoconstrictor, the patient, and their pathology.

- Deep anaesthesia:** pulpectomy, pulpotomy, root canal treatments, extraction, deep descaling, multiple treatments, pulpitis
- Semi-deep anaesthesia:** dentinoenamel treatments.
- Enamel treatments, descaling.**

## Why choose osteocentral anaesthesia with QuickSleeper ?

- + Immediate, pain-free, and deep anaesthesia
- + Effective even on a mandibular molar with pulpitis
- + No unnecessary numbing of the soft tissues
- + Control of the necessary quantity injected
- + Up to 6 teeth anaesthetised with one injection
- + Work on several quadrants in the same session
- + Allows planning of long appointments

*"The QuickSleeper proves (...) to be a high-performance tool for dental surgeons; it represents tangible progress in daily practice from several points of view."*  
**Dr. D. GERDOLLE** - Cosmetic dentistry, Montreux (Switzerland)

Electronic anesthesia for everyone.

## Dentahitec

Les stylos d'anesthésie qui changent la vie

# SleeperOne 5

## Why choose electronic anesthesia with SleeperOne?

Electronic injection allows perfect control of injection speeds for:-

- performing painless mucous and palatal anesthesia
- optimize all infiltration, para-apical, block and intraligamentary anesthetics.

In addition to being reliable, this system requires few consumables. It will also give a modern and differentiating image to your practice.

- + Improves the **effectiveness of anesthesia**
- + **Painless delivery** thanks to electronically assisted injection
- + The **"magic wand"** for children
- + **No increased muscular effort** for dense tissue injections
- + **Reduces the risk of intraligamentary and palatal necrosis**

## More comfort for the patient and the dentist!

Reduction of MSDs	★★★★	★★☆☆	★★☆☆

“ 1 ml / min is the optimal injection speed anesthetic. [Handbook of Local Anesthesia Stanley F.Malamed] ”

### Reassuring

The appearance reassures children and adults alike.

### Precision

The pen grip places your fingers as close as possible to the needle for better stability control.

### Intuitive

The handling is easy, pleasant and does not change your protocols.

### Applications

MIH, Pulpitis, Osteocentral in children

# Soan

## ECO-FRIENDLY DESIGN

Like the entire Dentalhitec range, Soan requires few consumables. Today we go further by paying special attention to limiting our carbon footprint.

- Eco-friendly packaging
- Sterilizable and reusable containers
- Locally sourced preferred materials
- Programmable auto-off function
- No use of disposable batteries

Optimized and comfortable injections for everyone.

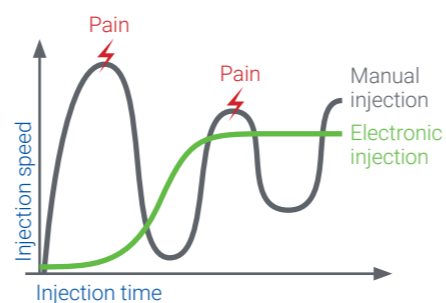

# Soan

With its elegant and friendly design, this computerized injection system offers you unbeatable precision for all your local anesthetics.

- + **Easy and convenient** handling
- + **Painless for ALL injections** (even palatal) thanks to the precision of a real pen grip associated with adapted flow rates
- + Soan is **compatible with all dental needles**. Its association with Effitec Needles will eliminate the "prick" sensation offering the patient an optimal anesthesia experience
- + **Easy and effective intraligamentary injections** resulting in a fast onset of anesthesia without any collateral numbness (bilateral mandibular treatments possible)
- + **A non-threatening design** that reassures all patients
- + Optimal for the performance of **intraosseous anesthesia on children** (efficiency for MIH, pulpitis,...)

## More fun in your practice!

Thanks to its high tech functions and ergonomics, optimize all your local anesthesia injections, for all your patients for all your patients.

## More comfort for the patient and the dentist!

	Soan	Manual syringe	Ratchet syringe

## Dentalhitec

Les stylos d'anesthésie qui changent la vie

# Effitec

## Why choose Effitec needles?

Their double scalpel bevel incises tissues without tearing them.

- ✚ The needle **penetrates deeper** and without twisting for intraligamentary and intraseptal injections.
- ✚ For attached mucosa and palatal injections, a specific and "intelligent" indicator on the hub helps to correctly orient the bevel for pain-free and minimal penetration depth.
- ✚ Your anaesthesia will be **easier, more effective, and quicker**.
- ✚ Needles specifically developed **for osteocentral anaesthesia** thanks to their flat bevel surface.

## The needle revolution

"Depending on what it is used for, the needle plays a role in whether or not the injection is painful and in the success of the anaesthesia. For all of the injections made, the practitioner is first confronted with the pain caused by inserting the needle. Classic needles (single bevel) penetrate the tissues by pulling them apart and thereby create tension that generates pain. The latest generations of needles (double bevel) cut the tissue like a scalpel.

They release tension and are therefore less painful."

Dr. Alain VILLETTE

## A range for all needs

### Easy and pain-free penetration

The mucosa is incised moving less tissue for greater accuracy and comfort.

### Adapted to intrasosseous anaesthesia

The perforation is easier to perform and does not heat the bone

### Compatibility

Effitec needles are compatible with all syringes on the market and with all anaesthesia techniques.
